October 4, 2006

FOR IMMEDIATE RELEASE:

Precision Industries Corporation is pleased to announce that it has upgraded its Quality System registration from ISO:9002/QS9000 to ISO9001:2000 for the Design and Manufacture of Molded Rubber Products, Diaphragms, and Gaskets.

"This is in recognition that our customer base engages Precision Industries earlier in the design stage for high tolerance, thin-walled diaphragms and we wanted to demonstrate our commitment to this design responsibility." – Glenn Thomas, Director of Quality Assurance for Precision Industries Corporation (PIC).

PIC has been registered to ISO and QS9000 since 1997 and continually monitors its Quality System for opportunities for improvement.

PIC has made significant investment in design and validation facilities at its Wisconsin facility to enhance further its ability to provide a total engineering solution for its OEM customer requests. This includes an Application Test Laboratory for long-term environmental, life cycle, and product development testing. Our customers can bring a product concept to PIC and initiate a design-to-validation process that delivers the true assurance that the diaphragm incorporated in their application will meet their design criteria.

If you have any questions about PIC's Quality System or product inquiries please contact our sales department at 262-946-0077.
